

# ANT BATTERY POWERED PIT JACK

## ANT2x10K

Simplicity in the extreme. Power forward – up / power reverse – down. This market leading pit jack is very quick compared to air powered pit jacks - just 25 seconds to rise to full height and 15 seconds back down again. It is up to 10 times more energy efficient and can be run for a day without changing batteries. BLDC motor and lithium batteries result in excellent efficiencies and **No** hazardous cables or airlines in the pit. The speed is completely variable allowing accurate manoeuvrability for those fiddly assembly jobs. The jack is custom made to suit your pit and has the narrowest frame depth in the market, making it easy to go through to the other side.

2 YEAR WARRANTY

20 TONNE CAPACITY

MADE IN NEW ZEALAND

## FEATURES

### Battery Powered

36V Lithium Batteries and charger, power level meter

### Lifting Adapters

Range of adapters available

### Extensions

Range of extensions and mechanical locks available

### Full Safety Systems in Manifold

The brains of the system, load holding valves, check valves and no flexible hoses

### Moveable Cylinders

Handle to help move cylinders to precise position
